

This document describes the cumulative changes made to Portal since v2.8.1.

New In This Version

- The built-in list now correctly matches the firmware version when a node has a script loaded and there is no local copy of the script.
- Portal will no longer send “None” for blank argument fields on built-ins with multiple optional arguments if no optional arguments are provided. If any of the optional arguments are provided, then blank argument fields are replaced with “None”.
- Portal will no longer send “None” for blank argument fields on built-ins with a single optional argument.

Installation Notes

- The installer will automatically remove a previous version of Portal if one is installed.
